

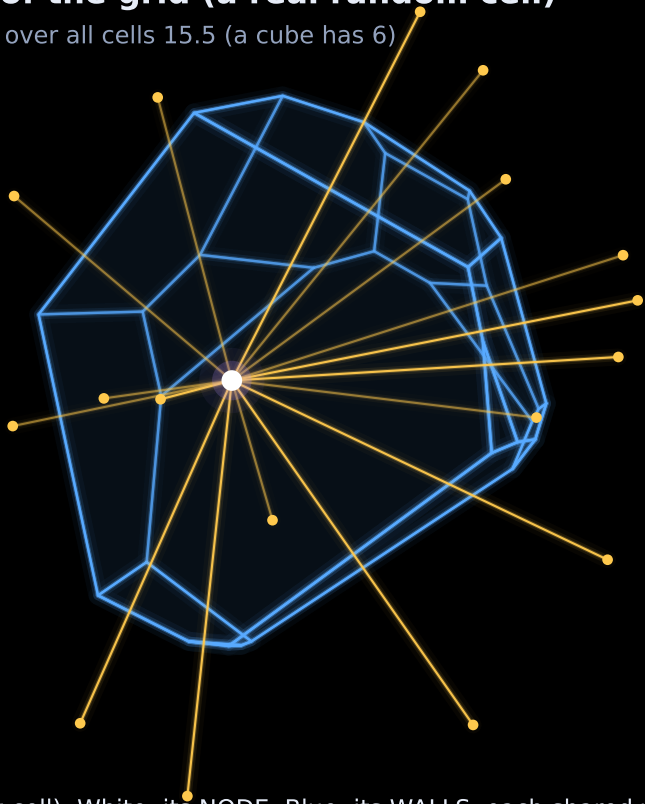

Figure 10. The grid's building block: a random cell, its links, and the size it must have

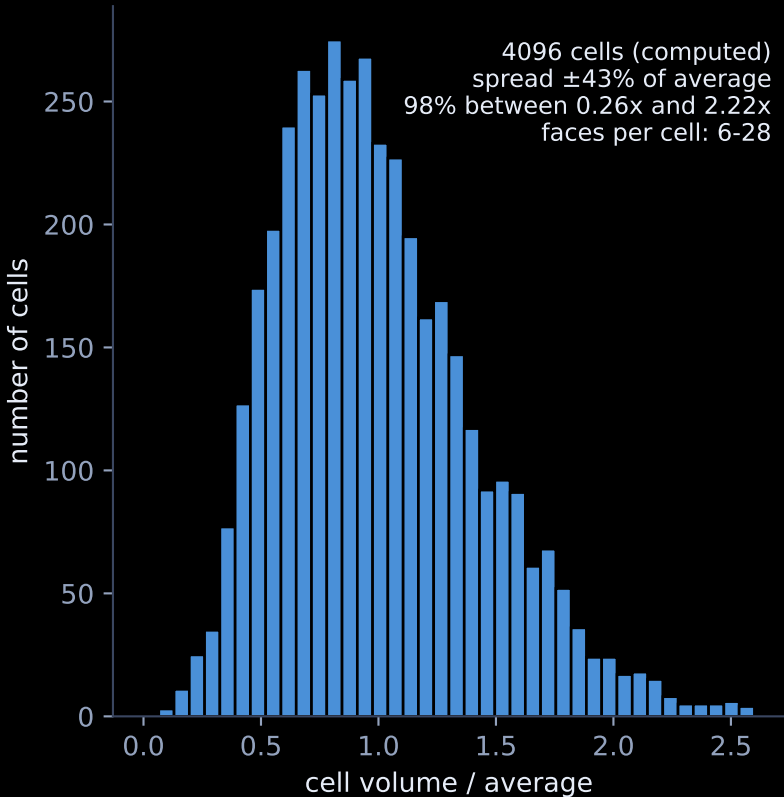

(a) One cell of the grid (a real random cell)

17 faces; average over all cells 15.5 (a cube has 6)

GRID CELL (Planck cell). White: its NODE. Blue: its WALLS, each shared with one neighbouring cell. Gold: its TENSION LINKS, one through each wall to the neighbouring node; a link's strength is set by its wall's area.

(b) Cells come in a spread of sizes

(c) How big can a cell be?
