

Figure 8. Black holes: the grid cannot be compressed without limit

(a) The core of a collapsing star

(b) Analogy

picture

a full lift: people cannot squeeze any closer,
so the push turns into a rebound

The diagram shows a 5x5 grid of circles. The circles in the corners and along the edges are orange, while the circles in the interior are blue. This arrangement illustrates a 'full lift' where the central elements are pushed away from the edges, creating a rebound effect.

result: a 'Planck star' at the centre, hidden by the horizon;
no observable difference for $>1e26$ years
